

# Eminent NIHers

## NIH Eminent Scientist Profiles

NIH researchers have made major contributions to health and basic medical science for more than 100 years. These include more than [20 winners of the Nobel Prize](#), more than [30 winners of the Lasker Award](#), and more than [200 members of the prestigious U.S. National Academies](#). The NIH Legends Collection is a project to gather oral, video, and peer-reviewed written histories, obituaries, biographies, and photographs of these remarkable individuals.

We hope this growing collection provides a more in-depth perspective of a select group of NIH researchers of years past. For a complete list of active NIH principal investigators, refer to <https://irp.nih.gov/pi>.

Please note that NIH History Office does not own most of the resources gathered in this collection, and many items may be copyrighted.

- [Christian Anfinsen](#)
- [Charles Armstrong](#)
- [G. Gilbert "Gil" Ashwell](#)
- [Gerald D. Aurbach](#)
